

RECORD BREAKER RYAN PROVES IF YOU'RE GOOD ENOUGH YOU'RE OLD ENOUGH!

Ryan Broomfield, right, is the youngest ever shift manager in the 67-year history of power production at Wilton at just 25. He has beaten a record previously held by Dean Mitchell, left.

The meteoric rise of a talented Wilton employee taken on as a Sembcorp-sponsored apprentice just six years ago has set a record that may never be surpassed.

Just four years after completing his Tees Valley Production Technician apprenticeship training, 25-year-old Ryan Broomfield has now been promoted to the position of shift manager in the utilities team.

He becomes the youngest person to occupy the role in the entire 67-year history of power production on the Wilton International site.

Ryan's peerless skills mean he was the natural choice for a role which puts him in charge of the eight-man A-Shift team.

Sembcorp's five shift teams are responsible for the reliable running of several hundred million of pounds of assets that power our blue chip customers on the site.

Ryan, whose personal development has also seen him recently complete a chemical engineering degree at Teesside University, smashed a record previously held by Fran Kay, recently promoted to Plant Manager and Dean Mitchell, a fellow utilities shift manager, by two years.

He said: "It's an honour and a privilege to be given such a position of responsibility and I'm determined to ensure my team plays its part in maintaining our reputation for quality service to our customers."

Dean said: "Ryan has shown a maturity and competency beyond his years and is now an integral and valued part of our team. I congratulate him on his achievement which I doubt will ever be beaten."
